

Dr. Fruchtman and Dr. Beneski highly recommend the **optomap**® Retinal Exam to all of their patients for the following reasons:

- it is a ***non-invasive technique*** to examine the health of your eye, without the side effects of drops or blurry vision
- it provides a ***high resolution picture*** to compare to in the future
- it allows for the ***detection of eye disease sooner*** than a dilation

The **optomap**® Retinal Exam contributes to our standard of care and improves patient education and satisfaction. There is a nominal charge of **\$39** for this procedure, *that is not covered by insurance.*

I have read this and understand that a widefield view of the retina is an important part of a comprehensive eye exam.

- I would like to have the **optomap**® test performed today.

- I would like to be **dilated** today.
